**Generate Measurement Data Word Problems - Step-by-Step Lesson**

During class, students get their English grades back. The best possible score was a 6.

Make a line plot based on the data chart:

Students	Scores
1	3
2	6
3	5
4	4

**Explanation:**

Step 1) First we look to see what is being asked of us.

“Make a line plot based on the data chart:”

In a line plot we make boxes, circles, or dots equal 1 scoring unit. In this case, each student will get 3 to 6 boxes based on their score.

Student 1 got 3 boxes, Student 2 got 6 boxes, Student 3 got 5 boxes, and Student 4 got 4 boxes.
