

Division Word Problems - Step-by-Step Lesson

Lesson 1 Division Problem:

A group of 4 students collected a total of 12 pages of a notebook for recycling. If they each collected the same amount, how many pages did each student collect?

Students

Pages

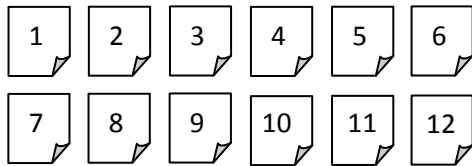

Explanation:

Step 1) First we look to see what we have to find out.

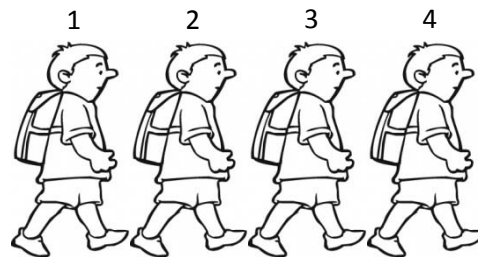

“How many pages of a notebook did each student collect?”

To find out the number of pages collected by each student we will have to distribute all the pages equally to each student. So, we have to do division.

We could do it this way: Divide the number of pages by the number of students.

$$12 \div$$

$$4 = 3$$

Each student collects 3 pages.
