## Graphing Equations - Step-by-Step Lesson

Graph this function using intercepts:

$$x + y = 5$$

### Explanation:

The x-intercept is the x-coordinate of the point where the graph crosses the x-axis.

The y-intercept is the y-coordinate of the point where the graph crosses the y-axis.

The x-intercept where  $y = 0$  and solve for the x-intercept.

$$x + y = 5$$

$$x + 0 = 5 \quad \text{Plug in } y = 0$$

$$x = 5 \quad \text{Simplify}$$

So coordinates are  $(5, 0)$ .

The y-intercept, where  $x = 0$ . solve for the y-intercept.

$$x + y = 5$$

$$0 + y = 5 \quad \text{Plug in } x = 0$$

$$y = 5 \quad \text{Simplify}$$

So coordinates are  $(0, 5)$ .

We draw the two intercepts on a graph and let a straight line pass straight through them.
