Polynomial Identities as Complex Numbers - Step-by-Step Lesson

Rewrite as a complex number:

$$x^2 + 9$$

Explanation:

Complex numbers usually consist of three parts:

$$\begin{array}{ccc}
 & a + bi & \longleftarrow \sqrt{-1} \\
 \nearrow & & \uparrow \\
 \text{Real Part} & & \text{imaginary part}
 \end{array}$$

$$\begin{aligned}
 & x^2 + 9 \\
 &= x^2 - (\sqrt{-9})^2 && \text{(Rationalize the whole number as a form of } i) \\
 &= x^2 - (\sqrt{-9})^2 && \text{(Factor)} \\
 &= (x+3i)(x-3i)
 \end{aligned}$$

The answer is: $(x+3i)(x-3i)$.
