## Comparing the Number of Objects in a Group Step-by-Step Lesson

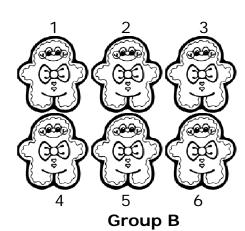

1) Which group has more? \_\_\_\_\_

**Answering #1:** To determine this we count the number in each group. The group that has a larger number of objects would be our answer.

Group A has 7. Group B has 6. 7 is a higher (larger) number than 6. Group A with 7 objects has more than group B and is the answer.

-----

**Group A** 

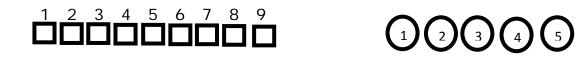

**Group B** 

2) Which Group has less?

Name:	Date
-------	------

Answering #2 – Count the number of objects. The set of objects with the smaller amount is the answer we are looking for.

**Group A** 

Group A has 9 objects. Group B has 5 objects. The question asked for which group has "fewer objects". Group B has less objects than Group A, so Group B is our answer.

**Group B**
