## Express as a Single Logarithm - Step-by-Step Lesson

Express the following as a single logarithm and simplify:

1) $\log 4+\log 7$
2) $\log 5-\log 2$

## Explanation:

1) From the property of logarithm:

$\log a+\log b=\log a^{*} b$
Hence,
$\log 4+\log 7=\log 4 * 7$
$=\log 28 \quad$ is a single logarithm form.
The value of $\log \mathbf{4}$ in $\log$ table $=\mathbf{0 . 6 0 2 0 6 0 0}$
The value of $\log \mathbf{7}$ in $\log$ table $=\mathbf{0 . 8 4 5 0 9 8 0}$
Hence,
$\log 4+\log 7=0.6020600+0.8450980$

$$
=1.45 \quad \text { which is same as } \log 28 .
$$

2) From the property of logarithm:
$\log a-\log b=\log a / b$
Hence, $\log 5-\log 2=\log 5 / 2$

$$
=\log 2.5 \quad \text { is a single logarithm form. }
$$

The value of $\log 5$ in $\log$ table $=\mathbf{0 . 6 9 8 9 7 0 0 0 4}$
The value of $\log \mathbf{2}$ in $\log$ table $=\mathbf{0 . 3 0 1 0 2 9 9 9 6}$
Hence, $\log 5-\log 2=0.698970004-0.301029996$

$$
=0.4 \quad \text { which is same as } \log 2.5
$$
