Intermediate Money Word Problems - Guided Lesson Explanation

Explanation#1

We have to calculate the total cost. We can do this by taking the sum.

$23 + $45 = $68

The answer is $68

Explanation#2

We have to calculate the cost of each ticket.

If we divide the total cost by the number of tickets, we can find the cost of each ticket.

$47 ÷ 6 = $7.83

The answer is $7.83

Explanation#3

We have to calculate the amount of money left.

We first find the total cost of the burgers.

$8 (cost per burger) × 5 (total burgers) = $40

This is the total that she spend for burgers.

Now $78 - $40 = $38

The money that is left over is $38
