## Percentage Decrease Word Problem Guided Lesson Explanation

For all of the problems we need to detemine the percentage decrease. We can use this simple formula to help us:
$\frac{\text { difference of values }}{\text { larger value }} \times 100 \%$

1. J oe drank 12 cups of coffee (last week), 5 c ups (this week).

$$
\frac{12-5}{12} \times 100 \%=\frac{7}{12} \times 100 \%=0.5833 \times 100 \%=58.33 \% \text { (58\%) less coffee }
$$

2) Joe overtime pay $=\$ 683$, no overtime pay $=\$ 512$
$\frac{683-512}{683} \times 100 \%=\frac{171}{683} \times 100 \%=0.25 \times 100 \%=25 \%$ less pay
3) Order pizza $=26$ pieces of pepperoni, J oe's pizza 6 pieces of pepperoni.
$\frac{26-6}{26} \times 100 \%=\frac{20}{26} \times 100 \%=0.7692 \times 100 \%=76.92 \%$ (77\%) less coffee
