

Name _____

Date _____

Relate counting to addition and subtraction - Guided Lesson Explanation

Explanation to #1

Step 1) Identify what is being asked of you.

We need to find the number that doesn't fit.

Step 2) We have to count by 4s ,so if we add-

$$226 + 4 = 230$$

$$230 + 4 = 234$$

$$234 + 4 = 238$$

$$238 + 4 = 242$$

$$242 + 4 = 246$$

$$246 + 4 = 250$$

In the question, there is 236 after 234; but it should be 238.

226 230 234 236 242 246 250

So 236 is the odd one.

Explanation to #2

Step 1) In this question we have to count by 3s , so we have to add 3 numbers more to the current number.As-

92 95 98 101 104 107 110

Name _____

Date _____

Explanation to #3

Step 1) We have to find the missing number.

125 131 _____ 143 149 155 161

Step 2) In this case, we have to subtract the first number from second number.

To find the missing number.

$$131 - 125 = 6$$

$$\underline{\quad} - 131 = \underline{\quad}$$

$$143 - \underline{\quad} = \underline{\quad}$$

$$149 - 143 = 6$$

$$155 - 149 = 6$$

$$161 - 155 = 6$$

Here we see that there is a difference of six. So that

$$131 + 6 = 137$$
