Length Word Problems In Units- Step-by-Step Lesson

Lesson 1 Visual Unit Length Word Problems:

Toby has an alarm clock. He wants to put the alarm clock on a small rack. But he don't know the length of alarm clock. He wants to know the length of his alarm clock? Use the units of boxes to determine the length of the clock.

Boxes

Clock

Explanation:

Compare the length of the alarm clock with the height of the boxes. Observe the height of the alarm clock in respect to the number of boxes. It is a good idea to draw a line from the top and bottom of the clock to the box units. This way you can easily see how many boxes the clock covers.

We can see that the height of clock is equal to the height of six boxes.

1
2
3
4
5
6

This answer is six (6) box units.
