## One and Tens Place Value - Step-by-Step Lesson

**Lesson : Understanding the value of the digits of a two-digit number:**

Given: this set of blocks is equal to 10 blocks.

□□□□□□□□□□

How many blocks appear below?

A) □□□□□□□□□□ \_\_\_\_\_

□□□□□□□□□□

□□□□□□□□□□

□□□□□□□□□□

### Explanation:

First we look to see what is being asked of us.

“How many blocks appear?”

Step 2) Since one set of blocks is equal to 10 blocks, we could add the numbers of blocks in each row to get a total.

□□□□□□□□□□	10
□□□□□□□□□□	+ 10
□□□□□□□□□□	+ 10
□□□□□□□□□□	+ 10
	40

After adding all blocks we get 40 blocks.
