## Measurement Tools - Step-by-Step Lesson

### Lesson 1 Measuring length:

Which tool would you use to find out how heavy a basket of apples is?

Ruler     Yardstick     Scale     Measuring tape     Measuring cup

### Explanation:

Step 1) First we have to find out what is being asked of us.

How would you measure the weight of a heavy basket of apples?

**A ruler** is a tool used to measure the distance (the length in centimeter or inches).

**A yardstick** is used to measure the distance and length in yards (larger distance than above).

**A scale** is used to measure the weight of the object.

**A measuring tape** is a tool used to measure the height or length in inches and meter.

**A measuring cup** is used to measure the volume.

So, a basket of apples is measured by the scale.

Scale
