

### Generate Measurement Data Word Problems - Guided Lesson Explanation

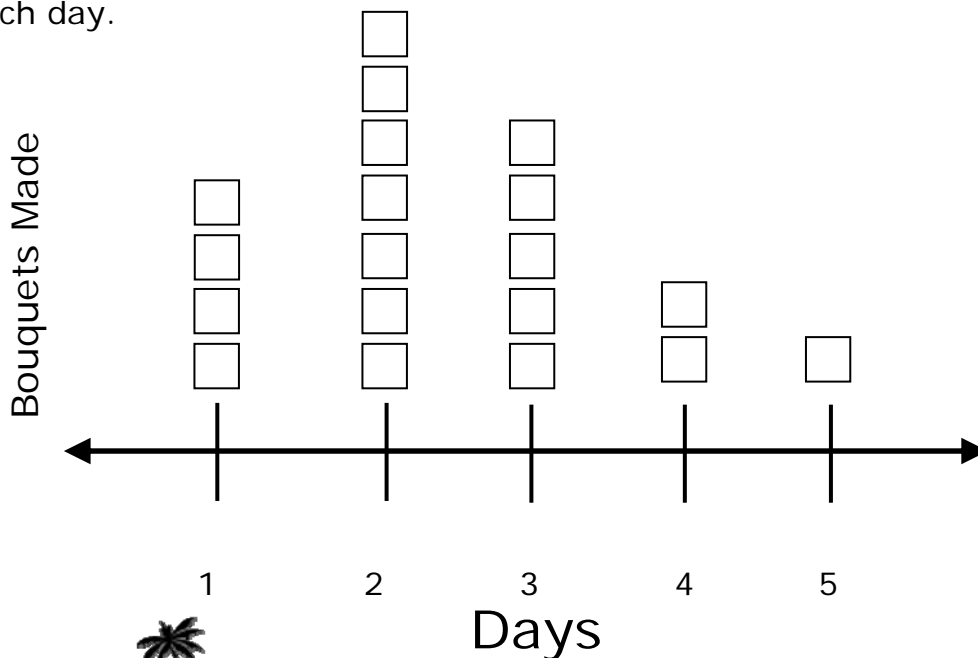

#### Explanation to #1

We draw our number line and label it for each of the 5 days. We then draw a box to represent each tree that was planted on each day. Day 1 had 2 trees planted, Day 2 = 5, Day 3 = 6, Day 4 = 3, Day 5 = 4.

#### Explanation to #2

Just as above, we make our number line and label it according to our data (Days, Bouquets Made). We make a box for the number of bouquets made each day.

Name \_\_\_\_\_

Date \_\_\_\_\_

### Explanation to #3

We set up our line plot as we have in the other two problems. Label the bottom line "Days" and provide a line for each of the 5 days. Label the rising column "Employees Hired". Draw a box for every employee that was hired.
