

Recognizing Equivalent Fractions - Step-by-Step Lesson

Lesson 1 : Recognize the fraction and reduce it to the lowest term to make it equivalent.

Explanation:

First we need to understand the meaning of equivalent fractions.

Equivalent fractions - Two fractions with different numbers that have the same value. When you reduce the fraction to their lowest terms, they have the same value.

Count whole parts and colored parts of each model.

Let's reduce everything to lowest terms. $2/3$ is in lowest terms.

To reduce $6/9$ we will divide it by 3 to make it equivalent.

$$\frac{2}{3} = \frac{\cancel{6}^2}{\cancel{9}_3} = \frac{2}{3}$$

Now, $\frac{2}{3} = \frac{2}{3}$
