Creating Fractions from Story Problems - Step-by-Step Lesson

Lesson 1

There were 8 apples on a table. 4 apples rolled off onto the floor. What fraction of the apples rolled off the table?

Explanation:

Step 1) We need to find out the total number of apples and the total number of apples on the floor.

Step 2) There are 8 apples. 4 out of the 8 apples are rolled off the table.

The fraction of the apples that rolled off the table = 4/8 or Equivalent 1/2
