Using Coordinate Graphs - Step-by-Step Lesson

Lesson 1: Finding Objects On A Coordinate Grid

Which shape is at $(-2.5, 0)$?

- 
- 
- 
- 

Name _____

Date _____

Explanation:

Step 1) We know that-

A positive number tells us to move right or up.

A negative number tells us to move left or down.

Step 2) First, we start at $(0,0)$, which is the point where the axis intersect.

The first coordinate tells us that the distance is right or left.

Count 2.5 units left (This direction because it is a negative value).

Step 3) The second coordinate tells us the distance up or down. Count 0 units up.

The hexagon is at $(-2.5,0)$.
