Understanding Math Expressions - Step-by-Step Lesson

Lesson 1 Simple expressions calculation:

Write an expression for

$$4 \times (2 + 6)$$

Explanation:

We have to write an expression, i.e., representing an equation in words.

Let's break it into parts. We have two parts:

$$1) 4 \times \quad \text{and} \quad 2) (2 + 6)$$

Let's write a sentence for each of the parts:

$$1) 4 \times$$

Four times

$$2) (2 + 6)$$

The sum of two and six.

Let's put it all together.

The answer will be: - four times the sum of two and six.
