

Leaping into 4-Step Order of Operations

Solve the problem following the order of PEMDAS as it appears in the problem.

Remember that multiplication and division are interchangeable. Solve either the multiplication or division that appears first when reading from left to right.

Addition and subtraction are also interchangeable. They are solved as they appear when reading the problem from left to right.

Example

$$4 \times 3 \div 3 + 5 \div 1$$

$$4 \times 3 \div 3 + 5 \div 1 =$$

$$12 \div 3 + 5 \div 1 =$$

$$4 + 5 \div 1 =$$

$$4 + 5 =$$

$$9$$

Example

$$(3 + 2) \times 2 \div (1 + 9)$$

$$(3 + 2) \times 2 \div (1 + 9) =$$

$$5 \times 2 \div (1 + 9) =$$

$$5 \times 2 \div 10 =$$

$$10 \div 10 = 1$$
