Coordinate Graphing and Position - Step-by-Step Lesson

Lesson 1 Position Problem:

Find the value of d. Write your answer as a decimal number.

Explanation:

Step 1) The number line goes from 0 to 1 with ten equal intervals. Each interval represents 0.1 (a tenth).

Count the number of intervals from 0 to d.

There are 6 intervals.

d is 0.6

This follows the line as well because 0.6 is greater than 0 and less than 1.

Step 3) So, the answer is 0.6.
