Statistical Variability in Data - Step-by-Step Lesson

Lesson 1 Statistical Problem:

Britney stitched 35 dresses for each boutique in her city. She has never been to any of the boutiques before.

Is this sample of the dresses from the city's boutiques likely to be biased?

Circle: Yes   or   No

Explanation:

Bias means that you would be inclined to **pre-pick the outcome of a situation** based on your own situation, culture, or experiences.

No; she has no opinion on the boutiques prior to stitching her dresses.

So, the answer is 'No'.
