Unit Rates and Ratios of Fractions - Step-by-Step Lesson**Lesson 1 Fractions Problem:**

If $\frac{1}{3}$ of a gallon of paint covers $\frac{1}{9}$ of a gate, then how many gallons of paint are needed to cover the entire gate?

**Explanation:**

Divide the total amount of paint given ($\frac{1}{3}$ of a gallon) by the portion of the gate that was covered ($\frac{1}{9}$).

$$\frac{1}{3} \div \frac{1}{9} =$$

To complete a fractional division problem, we will write $\frac{1}{9}$ as an improper fraction. Turn this from a division problem into a multiplication problem by multiplying by the reciprocal.

$$\frac{1}{3} \div \frac{1}{9} = \frac{1}{3} \times \frac{9}{1}$$

Now we will multiply:

$$= \frac{1 \times 9}{3 \times 1} = \frac{9}{3} = 3$$

So the answer is 3 gallons of paint.
