Solving Simultaneous Equations (Linear and Quadratics) - Guided Lesson

Complete the following problems:

1. $y = x^2 + 3x - 4$

$$y - x = 4$$

2. Solve the following simultaneous equations by graphing:

$$y = x + 4$$

$$y = x^2$$

3. Calculate the following simultaneous equations by graphing:

$$y = x + 6$$

$$y = x^2$$
