

**Proving Triangle Theorems - Guided Lesson**

Complete the following problems:

- 1) Find the length of PR by using the side splitter theorem.

$$\begin{array}{ll} PQ = 6 & PR = \\ RT = 12 & QS = 14 \end{array}$$

- 2) Proof: Triangle Sum Theorem

Given:

$$\angle A = 2x^\circ$$

$$\angle B = 3x^\circ$$

$$\angle C = (4/4)x^\circ$$

Prove:

$$\angle B = 90^\circ$$

Name \_\_\_\_\_

Date \_\_\_\_\_

### 3) Proof: Triangle Exterior Angle Theorem

Given:

$$\angle P = 30^\circ$$

$$\angle QRS = 140^\circ$$

Prove:

$$\angle Q = 110^\circ$$
