### Explanation for Guided Lesson - Representing Objects 0 to 20

1) Number the squares starting with 1.

2) Pick any object you can think of. We chose a star. Draw it 11 times. You don't have to number them, but we did this so you can clearly see the count.

3) Run your pencil over all of the numbers to complete them.

1 7 11 15

4) This problem requires you to remember the number symbols.

Six = 6

Twelve = 12
