Addition Word Problems - Guided Lesson Explanation

Explanation#1

Number of students in first batch   = 45

Number of students in second batch = 53

We have to add students of both batches to get total students.

 45 + 53 = 98

So the total number of students = 98

Explanation#2

Candies in his right hand bag = 39

Candies in his left hand bag = 49

We have to add candies from both bags to get total of candies.

39 + 49 = 88

So the total number of candies = 88

Explanation#3

George = $59

Grace = $52

We have to add the money given to each child to get total money.

59 + 52 = 111

Harold gives $111 to his children.
