### Addition Word Problems - Guided Lesson

Solve word problems below:

1) David is grading batches of student tests. The numbers of students in his two batches are respectively 45 and 53. Find total number of students in both batches?

2) Dane has two bags of candy in his hands. There are 39 candies in his right hand bag and 49 candies in his left hand bag. How many candies does he have in total?

3) Harold is a father of two children named George and Grace. Harold gives \$59 to George and \$52 to Grace for their personal expenses. How much money did Harold give to his children?
