

Equations Involving Products and Quotients Guided Lesson Explanation

For both of these problems, we will identify the operation and value that is taking place next to the missing value. We will then perform the inverse (opposite) operation to on both sides of the equal sign.

1. $58 \times \underline{\hspace{1cm}} = 986$

$$\boxed{\div 58}$$

$$\boxed{\div 58}$$

$$\underline{\hspace{1cm}} = 17$$

2. $\underline{\hspace{1cm}} \div 34 = 61$

$$\boxed{\times 34}$$

$$\boxed{\times 34}$$

$$\underline{\hspace{1cm}} = 2,074$$
