Single Step Algebra - Guided Lesson Explanation

Explanation#1

We have to find the value of a. We need to subtract both sides by 35.

$$a = 67 - 35 = 32$$

So, the answer is 32.

Explanation#2

We have to find the value of c so that we can write the equation as:

$$c = 67 - 42 = 25$$

Subtracting 42 is the inverse of adding 42 to c.

So, the answer is 25.

Explanation#3

Step 1) First we have to see what is being asked.

Step 2) We have to find the value of d so that we can write the equation as:

$$d = 38 - 33 = 5$$

We can reverse the addition of 33 by subtracting 33.

So, the answer is 5.
