Decimal Word Problems - Step-by-Step Lesson

20 out of 150 students at Rogers Elementary school have an advanced art class.

Write a decimal that represents the portion of Rogers Elementary school that participates in advanced art classes?

Explanation:

Divide the number of students that participate in advanced art classes (20) by the total number of students (150) to find the decimal.

$20/150$ or $2/15$

So the answer is 0.13.
