Double Digit Division - Step-by-Step Lesson

Divide the numbers given below:

$$10 \overline{)20}$$

Explanation:

We have to divide 20 by 10.

The first thing you have to ask yourself is how many times does 1 go into 2, since they both end in a zero.

$$\begin{array}{r} 2 \\ 10 \overline{)20} \\ \underline{-20} \\ 0 \end{array}$$

So, the answer is 2.
