Simple Division with Remainders- Step-by-Step Lesson

Divide numbers below:

$$2 \overline{)7}$$

Explanation:

The amount that is left over after division is known as the remainder.

Here we divide 7 by 2

2 can only go into 3 times evenly.

$$\begin{array}{r} 3 \\ 2 \overline{)7} \\ \underline{6} \\ 1 \end{array}$$

After division we get the remainder of 1.

The answer is 3 remainder 1.
