Fractions of Numbers Lesson

Find the fraction of the given number:

$$\frac{1}{4} \text{ of } 21.$$

A fraction is a number that expresses part of a group. Fractions are written in the form or $\frac{a}{b}$ or a/b , where 'a' and 'b' are whole numbers, and the number 'b' is not 0.

The number 'a' is called the numerator and 'b' is called the denominator.

To get the fraction of any number, the text 'of' will be replaced by a multiplication sign.

$$\frac{1}{4} \times 21$$

Simply solve the expression as a multiplication expression and solve to its least expression and solve the expression to its least expression (if possible).

$$\frac{1}{4} \times \frac{21}{1} = \frac{21}{4}$$

Answer: $5\frac{1}{4}$
