## Multiplying Fractions By Whole Numbers Lesson and Practice

Write the multiplication problems as addition problems and solve them. Remember to give your answer as a mixed number and to simplify the fractional parts to lowest terms whenever possible.

$$6 \times \frac{7}{12} =$$

$$\frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} + \frac{\square}{\square} = \frac{\square}{\square}$$

One part of the expression is  $\frac{7}{12}$

Repeatedly add the number to get the desired answer.

The multiplication of whole numbers can be solved by repeated addition. Write the answers in the blanks provided.

$$\frac{7}{12} + \frac{7}{12} + \frac{7}{12} + \frac{7}{12} + \frac{7}{12} + \frac{7}{12} = 3\frac{1}{2}$$

Practice Problems.

1	$5 \times \frac{1}{2}$	2	$3 \times \frac{3}{7}$
---	------------------------	---	------------------------
