Fraction Operations Review (All 4 skills in one)- Step-by-Step Lesson

Add the fraction.

$\dfrac{4}{7} + \dfrac{9}{7}$

Explanation:

In this fraction the denominators (bottom numbers) are same. So add the numerators (top numbers). Then write the addition value with the denominator which was same. Like this:

$\dfrac{4}{7} + \dfrac{9}{7}$

$\dfrac{4 + 9}{7} = \dfrac{13}{7}$

So, the answer is $\dfrac{13}{7}$.
