

# Understanding Quadrants Step By Step Lesson

Describe the location of the two ordered pairs on the coordinate plane.

Ordered pair #A - (6, -4)

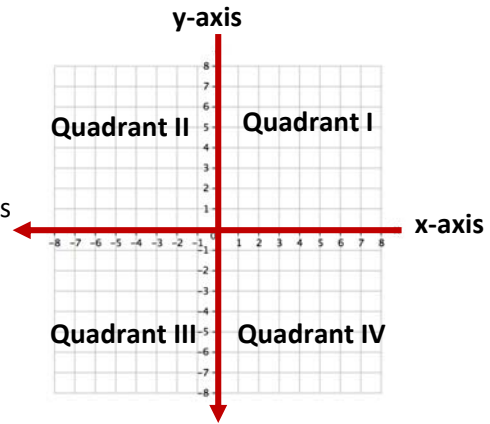

Ordered pair #B - (-4, 0)

## Explanation:

We should review the six positions found on the coordinate plane.

Use the diagram to the right. Note that points that do not fall on the x or y-axis are found in one of the four quadrants listed to the right.

Step #1) Plot the points on the coordinate plane.

Step #2) Interpret the location of the points.

Point A is located in the lower right quadrant.

Point A is in Quadrant IV

Point B is located on the line of the x-axis.

Point B is located on the x-axis.
