### Estimating Weight - Step-by-Step Lesson

You have to choose the best estimate for the weight of the object below.

50 grams

1 kilogram

3 kilogram

#### **Explanation:**

Ice cream cones are relatively light. So we are looking for a light, but not too light estimate.

As we know that:

A gram is used to measure the weight or mass of very light objects.

A kilogram is used to measure the weight of heavier objects.

So, if we estimate the weight of an ice cream cone it will be 50 grams.
