Counting Dollars and Change Lesson

How much money is present? Write the amount in dollars.

$_____

This is one dollar. It is worth 100 cents.	**This is five dollars. It is worth 500 cents.**
$1 or $1.00	**$5 or $5.00**
This coin is called one cent or a penny. We write it as 1¢.	**This coin is called a dime. It is worth 10 cents-10¢.**
This coin is called nickel. It is worth 5 cents or 5¢.	

First, determine the value of each coin and the dollars. Write the total amount of dollars, then a point, then the cents. Use the dollar symbol before the dollar amounts. Do not use the ¢ symbol.

 In the above question there is only single **1 dollar** note and there are 2 dimes which is equal to 10 + 10 = 20¢.

Therefore the total amount in dollars will be $1.20.

Ans. $1.20
