Visual Multiplication - Guided Lesson Explanation

Explanation#1

We count every row to get the answer. We can see that there are six rows having four images each.

$$6 \text{ rows} \times 4 \text{ columns} = 24$$

$$6 + 6 + 6 + 6 = 24$$

After counting we find that there are 24 images.

Explanation#2

First we have to see what is being asked. We have to solve the multiplication of 3 rows of 5 columns.

$$3 \text{ rows} \times 5 \text{ columns} = 15$$

$$3 + 3 + 3 + 3 + 3 = 15$$

After counting we find that there are 15 images.

Explanation#3

We count every row to get the answer.

We can see that there are five rows having five images each.

$$5 \text{ rows} \times 5 \text{ columns} = 25$$

After counting we find that there are 25 images.

So, we get the answer 25 by visual multiplication.
