

Name _____

Date _____

Rounding to the Nearest Tens Place (Under 100) Lesson

Mark the number **74** on the number line. Find which whole ten it is closest to; circle that number on the number line.

74 is closest to _____

First mark the number 74 on the number line.

Remember the following rules to round off:

1. Find the place value you want (the "rounding digit") and look to the digit just to the right of it.
2. If that digit is less than 5, do not change the "rounding digit" but change all digits to the right of the "rounding digit" to zero.
3. If that digit is greater than or equal to 5, add one to the rounding digit and change all digits to the right of the rounding digit to zero.

Look just to the right to it and if that digit is greater than or equal to 5, add one to the rounding digit and change all digits to the right of the rounding digit to zero.

So, rounding 74 to nearest tens, it becomes 70.

Fill in the blank with the answer.

74 is closest to 70.
