## Rounding Simple Fractions to the Nearest Whole Number

### Step By Step Lesson

Problem: Round  $\frac{4}{7}$  to the nearest whole number.

Explanation: Start by making a numbers line. Make sure to label the possible whole number values (0 or 1) on the numbers line.

$\frac{4}{7}$  is closer to 1 (3 places) than 0 (4 places). Therefore, the closest whole number is 1.
