

Subtraction with Regrouping Lesson

$$\begin{array}{r} 56 \\ - 19 \\ \hline \end{array}$$

Explanation:

When subtracting multi-digit numbers, we start subtracting at the right and move to the left.

- In this problem, 6 is not larger than 9.
- To make it large enough to be subtracted, we borrow a one from the tens place.
- This makes it 16.
- It also reduces the 5 in the tens place to a 4.
- Rewrite all these digits and subtract.

$$\begin{array}{r} 4 \ 16 \\ \del{56} \\ - 19 \\ \hline 37 \end{array}$$
