

## Missing Digit Subtraction Lesson

Find the value of A and B.

$$\begin{array}{r} 58 \\ - \underline{A4} \\ 2B \end{array}$$

We can break this problem into 2 steps.

Step 1) Evaluate the ones column. The ones column reads:

$$8 - 4 = B$$

$$4 = B \quad (\text{Simple subtraction})$$

Step 2) Rewrite the problem with what we know now and evaluate the tens column.

$$\begin{array}{r} 58 \\ - \underline{A4} \\ 24 \end{array}$$

The tens column now reads:  $5 - A = 2$

$$5 - 2 = A \quad (\text{We can rearrange the equation as})$$

$$3 = A$$

The final values are:  $A = 3$  and  $B = 4$
